ACL projectors with their tight, narrow beams have long been a mainstay of Rock’n’Roll shows. Originally the simplest of beams, they were gradually enhanced over the years with various types of accessories and improvements. But the arrival of ever more advanced moving lights on the scene seemed to spell the end of the old-fashioned ACL effect.

And yet, Clay Paky, always attuned to the latest trends on stage, sensed that there was a nostalgic yearning among designers for this classic Rock’n’Roll effect and decided to rethink the ACL in a modern format. This was how the Beam was born.

The name we gave this new type of product was a clear declaration of our mission. The Beam wouldn’t be a spotlight for projecting graphical images onto surfaces; nor would it be a washlight used to cast an even light onto surfaces and objects. Instead our attention was on the beam of light itself, on how it would appear in mid-air, and above all how it could be shaped and molded to create special aerial effects.

That goal led us to design a completely new type of optic, fundamentally different from any made for spots or wash lights before. The Beam became a new category of moving light. Although based on the same light sources used by other moving projectors, the Beam’s optics are designed to concentrate as much power as possible into a thick, ‘solid’ beam of light.

Clay Paky Beams maintain the same features offered by other Alpha moving lights: from colors and dimmers to gobos and frost filters that soften and shape the beam. And, to satisfy various demands, Clay Paky created not just one, but a whole series of Beam models, differentiated by power and complexity – making the range an incredibly versatile set of instruments. Brilliant at creating beams, they’re equally comfortable taking on spot- and washlighting duties alongside other lights on the rig.

Clay Paky’s reputation for quality is evidenced in a number of features: the chromatic purity of the beam, the speed and softness of the mechanical movements, the clarity and sharpness of the effects, and above all the rock solid reliability.
What they say about the Clay Paky Beam

I am a big fan of the Alpha Beam; it has brought the ACL feel back into shows with colour, beams and movement thrown in for good measure...a lighting designer’s dream!

Dave Hill, lighting designer

The Clay Paky Alpha Beam range has brought a unique new tool to long throw applications and has re-energised the air and atmosphere around many TV and live events.

Durham Marenghi, lighting designer

The Clay Paky Beam is a perfect unit when you need a bit of extra push!

Paule Constable, lighting designer

The Alpha Beams allow me to use 50% of the number of regular spot fixtures. So if I had 100 spot fixtures I would aim for 50 Beams... The Beam has become a light that I cannot design a show without.

Baz Halpin, lighting designer

The Clay Paky Beams were tremendous, adding brilliant punches of colour big enough for one of the biggest landmark events in one of the most famous locations in the world.

Jerry Appelt, LD for Victory Day Parade in Moscow and Eurovision Song Contest

The Alpha Beam 1500 blew away the 4K unit we were testing it against at the shoot-out. Optically, the 1500W beam turned out to be more visible than the 4000W beam!

Koert Vermeulen, LD for Singapore Youth Olympic Games

I am a big ACL guy, and the Clay Paky Beams are stunning for that purpose. The speed of movement, color change and gobos is incredible. This is one of the most impressive lights that I have used in a long time.

Cosmo Wilson, lighting designer

Seeing so much light leave such a small unit, with so few watts compared to other lights on the stage, is really surprising.

Giovanni Pinna, lighting designer

The Clay Paky Alpha Beams are the most complete products in the ACL category because they have everything: great power, a wide range of effects, high speed movement.

Mariano De Tassis, lighting designer

I was blown away by the Alpha Beams. They are just so tight; they can always be clearly seen. In that sense you get more value out of them.

Daniel Bocking, lighting designer

Clay Paky Alpha Beam 700 is not just a normal machine - it is a BOMB - a light cannon! Much more powerful than a Xenon search light. What a wonderful, sexy machine!

Roger Bakhos, lighting designer

The Clay Paky beams are astonishingly bright and so versatile. They really made the show.

Roger Williams, LD for Tonight's the Night show at BBC

[…] they’re an exciting new addition to the lighting designer’s palette.

Chris Kempton, LD for Friday Night with Jonathan Ross at BBC

Don’t be fooled by the Sharpy’s small package I was lighting up buildings across the highway with these fixtures!

Steve Lieberman, LD for Ultra Music Festival

Sharpy units are unbelievably fast. They have a ‘mirror-like’ speed combined with the organic elements of a moving head.

Rohan Thornton, lighting designer

The Sharpy definitely provided the bang for the buck. We used to be amazed when the Alpha 300 first came out; and now here’s the Sharpy putting out much more light using just half the power – it’s ridiculously bright.

Tim Routledge, lighting designer

They deliver all those beam effects and everything you need to get that extra layer that really punches through.

Eric Wade, lighting designer and programmer

The Sharpy’s tracer beams made a powerful impact, and indeed in some ways they gave more effective results than the Showguns installed along side.

Markus Kromer, LD for a private company party at the Festhalle Frankfurt.

The light output from such a small package is amazing! The Sharpy’s fast speed of movement is breathtaking! The lamps were small and discreet enough not to draw the eye in the set, but the effect they produced was gigantic!

Lee Allen, lighting designer

This is the type of output normally seen with Xenon fixtures, not sub-200W lamps that could pass as carry-on luggage.

Patrick Dierson, Live Design Online, February 2011 - Sharpy test

Clay Paky in their turn have done a good job of optical design to provide as narrow a beam as I’ve seen for some time.

Mike Wood, Lighting & Sound America, March 2011 - Sharpy test

What was really impressive… the speed of the fixture. The Sharpy is SUPER fast with it’s pan and tilt. It’s so fast it almost hurts to watch the fixture move.

Justin Lang, iSquint.net, March 2011 Sharpy test

Sharpy projects an extremely bright, sharp and narrow beam with less electricity, yet no compromise to the quality of the projection.

Douglas Cole, Sound & Lite, March/April 2011

I have to admit this fixture is the closest I have ever seen a yoke light move to a mirrored fixture. […] It is indeed the new age equivalent of a PAR 46 ACL beam on steroids.

Nook Schoenfeld, PLSN, June 2011, Sharpy test

Clay Paky has most certainly been the most innovative lighting manufacturer in recent times, and now has done it all again with Sharpy.

Paul Collison, AV Magazine, issue n°16

Clay Paky pioneered the Beam concept with this 300W concept that immediately became a landmark. The whole fixture is an innovation, delivering standard features with an extremely bright output for its class.

Grégoire Macé, Sono Magazine, March 2010

As it is, the Alpha Beam 300 is a “searchlight in miniature”, but with many more features. Let’s say it from the start: the amount of light coming out of it is extraordinary.

Walter Wehrhan and Detlef Hoepfner, Production Partner, May 2008

It’s light, bright, tight, really fast, and dead quiet. It’s not a generic moving light, but if you have the right application for it the Alpha Beam will certainly do the job and then some. I really like it.

Jimmy D., CX Magazine, October 2009

Alpha Beam 300 test

[…] We are witnessing the start of a new fixture generation, providing designers with new creative opportunities

Alfio Morelli, Sound & Lite, May-June 2008

Alpha Beam 300 test

[…] We are witnessing the start of a new fixture generation, providing designers with new creative opportunities

Alfio Morelli, Sound & Lite, May-June 2008

Alpha Beam 300 test
Beams can be used in a number of ways depending on the application. An important factor to consider is the size of the stage. In large arenas for example, beam diameter becomes just as significant as output, if audiences are to see the beam properly.

Another factor to consider is the speed of movement, which is faster the smaller the fixture. In order to meet a range of applications, Clay Paky has produced a broad range of Beam models, the broadest of any manufacturer. The fixtures are differentiated not only by lamp power, but by different optical systems capable of producing a wide variety of effects and projections.

Generally speaking the higher the wattage, the larger the fixture and the greater the cost. To justify the added cost, we incorporated a number of effects into the larger Beam projectors that make them multi-functional instruments, equally capable of spot-lighting and washlighting. The general rule is, the higher the wattage, the wider the set of features and effects.

The following comparison table is intended as a quick guide comparing the main beam characteristics of the various Beam models.

(*) using the built-in beam angle reduction device
WHY USE A CLAY PAKY BEAM?

The Beam’s tight parallel beams show up extremely well on stage - even the type of modern stages that are usually awash with high intensity LEDs.

With their slick and speedy movements, Beams bring energy and dynamism to TV and live shows recalling the rapid behavior of moving mirror fixtures.
The Beam creates a thick column of light, visible even without the aid of fog or haze, which can then be crafted into various shapes and sizes.

Beams are instruments for helping to define space, wrapping the stage in a curtain of light, or extending the space with lines of light that reach out beyond the scope of the stage.
The Beam concept allows light to reach previously unimaginable distances - not only as parallel shafts of light, but with the aid of the frost - as a highly effective wash light.

Beams bring a distinctive new look to stages, creating a powerful impact on audiences. They can be used to simulate massive laser beams or create feathery little wisps of light.
Beams are particularly awe-inspiring effects when arranged and synchronized in clusters of 3, 4, or more units.

The Beam combines the retro charm of an ACL with the advanced feature set of modern moving lights.
Beams fill the stage with their presence - to such a degree that designers find they need fewer fixtures overall.

Beams can be used as sky tracers, but with added color and speed of movement.

Beams are incredibly versatile - brilliant at creating interlocking beams of light, and just as effective as a soft edge backlight.
The Alpha Beam 1500 is the most powerful luminaire within the category of fully automated ACL fixtures. It generates a solid, super-concentrated parallel beam for very long-throw projections, and includes numerous features for shaping, coloring and animating the beam, creating spectacular mid-air effects. Featuring the new Fast-Fit 1500W lamp, Alpha Beam 1500 functions as a spot-light for long distance, focused projections as well as an excellent narrow-angle washlight.

- Optical unit with extremely high luminous efficiency (185,000 lux at 10 m)
- 1500W Lok-it discharge lamp
- Extraordinarily wide, fast and linear pan and tilt movements
- Narrow and parallel 4° beam
- CMY color system + color wheel (including CTO)
- 3 rotating prisms (5-facets, 6-facets, comet effect)
- 14 gobos (for pattern and beam size)
- Electronic focusing, for projecting sharp images at any distance
- Frost effect (light/medium/heavy) on dedicated channels
- High speed mechanical iris
- Hybrid dimmer (100-50% electronic; 50% to zero mechanical)
- Eco-friendly: may be used instead of very much larger and more expensive searchlights
- New generation, high performance electronics
- Modular construction for easy maintenance

WHERE TO USE IT

With its massive 8-inch (20cm) thick beam, the Alpha Beam 1500 is particularly visible at very great distances, making it a suitable Beam for large-scale spectacles such as sporting events, national celebrations and stadium rock shows. The Alpha Beam 1500 makes an excellent replacement for expensive sky tracers, but with even better performance and features, offering innumerable colors and spectacular aerial animations. As the most versatile tool in Clay Paky’s arsenal of Beams, the 1500 also doubles up as an effective Spot or Wash light.
TECHNICAL FEATURES

POWER SUPPLY
200 - 240V 50/60Hz

INPUT POWER
2,000VA at 230V 50Hz (PFC electronic ballast)

LIGHT SOURCE
1500W discharge lamp:
- Type: Osram Lok-it 1500W
- Cap: PGJ50
- Color temperature: 6,000 K
- Luminous flux: 135,000 lm
- Average life: 750 h

CHANNELS
Max 28 DMX 512 control channels

MOVING BODY
Angle: - PAN = 540° - TILT = 252°

ELECTRONICS
Long life self-charging buffer battery.
Firmware Upgrade with no power
Firmware upload from another fixture

WORKING POSITION
Functions in any position.
Hanging system: with fast-lock omega clamps (1/4 turn) on the base

MARKING AND APPROVAL
This product is cETLus Listed Mark, and complies with the UL 1573 and CSA C22.2 No. 166 standards.

BEAM 700

A compact blend of features, power and speed

Using just 700W in power, the Alpha Beam 700 creates highly visible beams that show up extremely well even on the brightest sets and stages. It is extremely compact in relation to its power and rich set of features. The Beam 700 is highly regarded for its fluidity and rapid speed of movements. Its rotating gobos and prism allow for beautiful mid-air animations; and a frost and focus add to the 700's all-round versatility.

+ Optical unit with extremely high luminous efficiency (100,000 lux at 10 m)
+ 700W Mini-FastFit discharge lamp
+ Incredibly compact for a 700W light (head length = 435 mm) + lightweight (20 kg)
+ Extraordinarily wide, fast and linear pan and tilt movements
+ Narrow and parallel 6,6° aperture beam
+ CMY color system + color wheel, including CTO and CTB filters
+ 1 rotating prism + 15 gobos (for pattern and beam size)
+ Hybrid dimmer (100-50% electronic; 50% to zero mechanical)
+ Electronic focusing, for projecting images even at great distances
+ Frost effect on a dedicated channel
+ High speed mechanical iris
+ Silent operation
+ New generation, high performance electronics
+ Eco-friendly: may be used instead of higher wattage and more expensive spotlights
+ Modular construction for easy maintenance
+ Half power mode (400W)

WHERE TO USE IT

The Alpha Beam 700 is positioned right at the center of the Clay Paky Beam range making it one of the most adaptable instruments, suited to a very wide range of applications. It is ideal for Touring and Corporate Events, where its compact size and low consumption really pay dividends. It has also become one of the mainstays of larger television studios and outdoor broadcasts. Above all, the Alpha Beam 700 is a tireless industry workhorse, a risk-free investment offering fantastic ROI.

SELECTED REFERENCES
Alpha Beam 300 uses a 300W light source to produce a slender, parallel beam which can be infinitely molded and colored in a variety of forms. Awarded for technological innovation in 2008, the 300 is highly regarded for its low weight and tiny footprint.

- The first and original “beam moving light” on the market
- Optical unit with extremely high luminous efficiency (33,000 lux at 10 m)
- 300W Mini-FastFit discharge lamp
- Natural 8° beam angle
- CMY color system + color wheel, including CTO and CTB filters
- 8 fixed gobos supplied as standard (4 image gobos + 4 beam angle reduction gobos)
- Innovative patented linear frost effect
- 0-100% mechanical dimmer
- Wide and quick pan and tilt movements
- Silent operation
- Extremely new design high performance electronics
- Eco-friendly: may be used instead of very much larger and more expensive spotlights
- Electronic ballast fitted as standard
- Modular construction for easy maintenance

WHERE TO USE IT

The first in the Beam family, the Alpha Beam 300 offers the best possible price per performance ratio. It’s an excellent solution for television studios where light weight and low power consumption are paramount. Those same characteristics make the Alpha Beam 300 ideal for fixed installations such as entertainment venues and themed environments as well as for smaller performances.
TECHNICAL FEATURES

POWER SUPPLY
200 - 240V 50/60Hz
100 - 120V 50/60Hz
Automatic power supply switching

INPUT POWER
550VA at 230V 50Hz (PFC electronic ballast)

LIGHT SOURCE
300W discharge lamp:
- Type: MSR Philips Gold 300/2 FastFit
- Cap: PGx28
- Color Temperature: 9,300 K
- Luminous flux: 22,000 lm
- Average lamp: 750 h

CHANNELS
Max 18 DMX 512 control channels

MOVING BODY
Angle: - PAN = 540° - TILT = 252°

ELECTRONICS
Long life self-charging buffer battery Possibility to upgrade the software through the DMX 512 input.

WORKING POSITION
Functions in any position
Hanging system: with fast-lock omega clamps (1/4 turn) on the base

MARKING AND APPROVAL
In conformity with the European Union Low Voltage Directive 2006/95/CE and Electromagnetic compatibility Directive 2004/108/CE. This product is cETLus Listed Mark, and complies with the UL 1573 and CSA C22.2 No. 166 standards.

STANDARD ACCESSORIES

MSR GOLD 300W/2 MINI-FAST-FIT (9,300 K) PHILIPS LAMP
code: L10087

OMEGA
for fixing clamps
code: 183102/802

OPTIONAL ACCESSORIES

CLAMPS
48-51mm, max 300 Kg hook for truss
code: C21070

SAFETY CABLE
Ø 4mm, length 680mm
code: 105041/003

IGLOO
IP54 fully outdoor enclosure
code: C61195

FOAM SHELL
code: F21172

ROXTER-CASE
(including 2 foam shell)
for 2 Alpha 700 / 300
code: F21205
**ALPHA BEAM 300**

**code: C61093**

**WEIGHT AND DIMENSIONS**
- Ø 31.5 mm
- 19.1 Kg (42.11 lbs)

**PHOTOMETRICS**

- **Standard (8.0°)**
- **with frost light (4.4° 50% - 8.6° 10%)**
- **with heavy light (12.6° 50% - 18.9° 10%)**

**COLOR WHEEL**

- CMY
- Standard (8.0°) with frost light (4.4° 50% - 8.6° 10%) with heavy light (12.6° 50% - 18.9° 10%)

It's probably no exaggeration to say that no moving light has ever enjoyed such immediate success as the Sharpy. Winning instant acclaim and a string of awards, the Sharpy stunned the industry for the unprecedented amount of light it manages to squeeze out of a 189W lamp. The unit produces a perfectly parallel beam of light capable of matching beams made by 1500W fixtures. Compact at 50cm tall, and weighing just 16kg, Sharpy’s incredibly rapid movements recall the speed of moving mirror fixtures. The unit delivers an unusually crisp, laser-like beam – free of any halation and discoloration around the edges, while the beam retains its narrow shape even at great distances.

+ 189W Platinum 5R discharge lamp
+ Unprecedented brightness – comparable to wattages many times higher (59,760 lx at 20m)
+ Perfectly parallel, laser-like beam, sharply defined and free of any halo
+ Adjustable beam angle from 0 to 3.8°
+ Interchangeable color wheel with 14 fixed colors
+ Interchangeable gobo wheel with 17 fixed gobos
+ 8-facet rotating prism
+ Electronic focusing
+ Mechanical dimmer
+ Frost Filter
+ Rapid and extensive pan and tilt movements
+ New, high-performance electronics
+ Patented Italian design
+ Small, lightweight and easily transported (only 48 cm x 16 kg)
+ Eco-friendly: replaces far larger and more expensive spotlights and searchlights
+ Electronic ballast fitted as standard

WHERE TO USE IT

Sharpy offers the purest example of the Beam concept, a perfectly parallel, narrow beam crisply defined in mid-air. This is a special effect that can be used in various ways according to the application. For large-scale spectacles, it can be used in clusters, creating fast-moving, narrow splinters of light reminiscent of laser beams. In smaller environments, the Sharpy becomes the dominant force filling the stage with its presence. A truly innovative product that opens up for completely new creative ideas.
TECHNICAL FEATURES

POWER SUPPLY
115/230V  50/60 Hz

INPUT POWER
350VA at 230V 50Hz

LIGHT SOURCE
Discharge lamp with a short arc burner in a reflector system
- Type: Philips MSD Platinum 5R
- Output Lamp power: 189W
- Color temperature: 8,000 K
- Luminous flux: 7,950 lm
- Average life: 2,000 h

CHANNELS
Max 20 DMX 512 control channels

MOVING BODY
Angle: - PAN = 540° - TILT = 252°

ELECTRONICS
Long life self-charging buffer battery
Firmware upgrade with no power
Firmware upload from another fixture

WORKING POSITION
Functions in any position
Hanging system: with fast-lock omega clamps (1/4 turn) on the base

MARKING AND APPROVAL
In conformity with the European Union Low Voltage Directive 2006/95/CE and Electromagnetic compatibility Directive 2004/108/CE. This product is cETLus Listed Mark, and complies with the UL 1573 and CSA C22.2 No. 166 standards.
